

User Acceptance Testing (UAT) Form

Verdant Search — AI-Boosted Multimodal Search Engine

Participant Role: ☐ End User ☐ Admin / IT Staff ☐ Evaluator

Date: _____ Session No.: _____

Section 1 — Feature Acceptance

Please tick (✓) one rating for each feature listed below.

Feature	Very Weak	Weak	Average	Good	Excellent
FR-1 — Authentication & User Management					
User can register a new account with email and password.					
User can log in using email and password.					
User can log out of the system.					
User can view their personal profile information.					
User can update their profile preferences (language, result count, reranker toggle).					
FR-2 — Core Search Interface					
User can submit a search query and receive ranked results.					
Search results are displayed with title, source URL, snippet, relevance score, and content type badge.					
User can apply metadata filters (date range, source type, content type) to narrow results.					
Relevance score is shown as a colour-coded progress bar on each result card.					
User can click a result card to open a document detail drawer with full chunk content and metadata.					
User can view the indexed date of each result directly on the result card.					

Feature	Very Weak	Weak	Average	Good	Excellent
FR-2.5 / FR-2.6 — Conversational Search & Follow-up Chips					
User can submit follow-up questions within the same session without losing context.					
The system displays exactly 3 suggested follow-up query chips after each AI response.					
User can click a follow-up chip to submit it immediately as a new query.					
User can click a follow-up chip to edit it before submitting.					
FR-2.8 — Research Workspace					
User can pin result documents to a persistent Research Workspace panel for side-by-side comparison.					
User can remove pinned documents from the Research Workspace.					
FR-2.10 — Reranker Toggle & Ranking Diff					
User can toggle the multimodal reranker on or off per query.					
Reranked result cards show a rank-delta badge (e.g. +3 / -2) indicating position change.					
FR-1.4 / FR-1.5 — Search History					
User can view a list of past search sessions.					
User can filter history by date range or keyword.					

Feature	Very Weak	Weak	Average	Good	Excellent
User can re-open a past session and continue the conversation.					
User can delete individual history entries.					
FR-5 — AI Summary & RAG Generation					
The AI panel streams a grounded answer based strictly on retrieved document context.					
Inline citations in the AI answer link to the corresponding result card in the document panel.					
The system acknowledges when the retrieved context is insufficient to answer the query.					
A confidence indicator is shown alongside the AI-generated answer.					
Query rewriting correctly converts conversational follow-ups into standalone retrieval queries.					
FR-6 — Crawler Management Panel (Admin)					
Admin can view the crawler fleet table with live status (ACTIVE / DEGRADED / DEAD / IDLE).					
Admin can view per-worker job counts, pages/min, uptime, and last heartbeat timestamp.					
Admin can view the Redis job queue depth (pending, in-flight, acknowledged).					

Feature	Very Weak	Weak	Average	Good	Excellent
Admin can inject seed URLs into the crawl job queue directly from the panel.					
Admin can create a new crawl job with seed URL, max depth, max pages, and content type options.					
Admin can pause, resume, or cancel an existing crawl job.					
FR-7 — Index & Database Management Panel (Admin)					
Admin can view the index overview dashboard (total documents, chunks, index size, last build time).					
Admin can browse and search all indexed documents with filter by source, date, and content type.					
Admin can trigger a full re-index or incremental index update from the panel.					
Admin can soft-delete a document from the index.					
FR-8 — Analytics Dashboard (Admin)					
Admin can view query volume over time (hourly / daily / weekly).					
Admin can view the top queries by frequency and zero-result queries.					
Admin can view query latency distribution (P50 / P90 / P99).					

Feature	Very Weak	Weak	Average	Good	Excellent
Admin can view crawler analytics (pages crawled, HTTP status distribution, content type distribution).					
Admin can view system health metrics (CPU, memory per service).					
FR-10 — System Configuration Panel (Admin)					
Admin can adjust BM25, HNSW, and RRF retrieval parameters (k1, b, ef_search, k constant) from the panel.					
Admin can update LLM configuration (model, temperature, max tokens, system prompt template).					
Admin can configure follow-up chip settings (enable/disable, number of chips, prompt template).					

Section 2 — Overall System Usability

Please tick (✓) one rating for each statement below.

Statement	Strongly Disagree	Disagree	Moderate	Agree	Strongly Agree
Overall, I am satisfied with how easy it is to use this search system.					
It was simple to submit a query and obtain useful results.					
It was easy to learn how to use the system without prior training.					
The interface layout (document panel, AI panel, workspace) is clear and well-organised.					
The system workflow from query to AI answer is straightforward and intuitive.					
It is easy to navigate between the search interface and the admin panel.					
The follow-up chip suggestions are relevant and useful for continuing my search.					
The AI-generated answers are grounded and trustworthy based on the cited sources.					
The search results are relevant to my query.					
The system responds within an acceptable time for an end-to-end search with AI summary.					

Statement	Strongly Disagree	Disagree	Moderate	Agree	Strongly Agree
The admin panel provides sufficient visibility and control over the crawler and index.					
The analytics dashboard gives me actionable insight into system usage and health.					
I would use Verdant Search as my primary tool for internal knowledge retrieval.
